fried shrimp basket . french fries

LITTLE STEAK DINNER \$14

filet medallions, buttered peas and carrots

{served for dinner only}

includes a drink
ages 12 and under only

frog facts

Some frogs can jump as much as 20 times their own length.

Some types of frogs have a round iris in their eyes, but some have horizontal slits, some have vertical slits, and some are even triangular or heart-shaped.

The smallest frog in the world is from Cuba, and is only 1/2" long. The largest frog in the world is from West Africa (Conraua goliath) and is about 12 inches long.

Because frogs have eyes and nostrils that are on the tops of their heads, they can see and breathe while the rest of the body is under water. Adult frogs breathe with lungs, but also absorb oxygen through their skin.

Frogs have smooth skin, and long legs to help them leap. Toads have drier warty skin and short legs, and they move by crawling or hopping rather than by leaping. Technically, though, toads are just a type of frog.

There are over 4000 species of frogs in the world, though only 88 species in the US and Canada. They are all over the world, except for Antarctica and Iceland.

Some tree frogs live their whole lives in the trees, and never come down. They even lay their eggs in the tree branches or on leaves.

Some frogs lay as many as 25,000 eggs while others may lay as few as 4.

Frogs don't drink water but absorb it through their skin.

Frogs have teeth on their upper jaws but none on their lower. Toads have no teeth.

In China it wasn't the Man in the Moon but the Frog in the Moon. In a lunar eclipse the frog swallowed the moon!
